

Jumpboard

for V2 Max Plus™ Rehab and Rehab Reformers

A firm, padded jumping surface for plyometric and aerobic exercise.

The wide platform of the Jumpboard allows for biomechanically sound foot placement, offering increased exercise options for post-rehabilitation or special needs clients. Easy to install, square mounting posts are held firmly in place with pressure gauge star knobs for added safety and security. Ideal handle location makes lifting the Jumpboard quick and simple. An increased height (to previous models) presents a larger surface area for hand placement and affords exercises in standing and lunging positions. Made of high-quality materials and construction, the metal frame offers superior stability, proven durability and continuous safety through high-intensity use. Thick UVA foam padding under durable vinyl upholstery provides cushioning from impact.

Product Specifications

- Width 22"
- Height 20"
- Weight 23 lbs
- Load Capacity 350 lbs

Soft Footbar

for V2 Max Plus™ Rehab and Rehab Reformers

Increased comfort for sensitive feet

Covered with layers of dense EVA foam, the soft footbar provides an ideal surface for sensitive or injured feet that require additional cushioning. Lower extremity exercises can be initiated at an earlier stage with this foot-friendly Reformer accessory.
